

STEAM Outdoor Environmental Education Opportunities

Waltham-based **Meadowscaping for Biodiversity (MS4B)** provides a variety of amazing educational opportunities. Meadow Clubs are specialty camps and afterschool programs offered at select summer camps and schools. Youth age 7 - 14 learn about biodiversity and ecology while repurposing unproductive turf lawn into pollinator patches and meadows filled with beautiful native plants, fluttering butterflies, and happy bees. With a unique curriculum, we educate citizen scientists and future stewards of the Earth.

*****Exciting Environmental Entrepreneurship
Program for Teens 15-17 begins in January 2018.*****

Teens Learn, Earn, and Return...In this dual-track program, teens have the opportunity to learn real-world business skills along with knowledge of ecosystems gardening. In spring, students receive a stipend to attend 16 sessions once a week for two hours afterschool.

In summer, teens work with college interns to set up a gardening service where they sell and install beautiful, low-maintenance native flowers, shrubs, and grasses on properties throughout Waltham. Students earn an hourly wage to develop 21st century career-readiness skills that prepare them for jobs and academic pursuits.

*****We invite you to join the growing number of property owners who are acting together to help heal the earth--through education and action--one backyard at a time.*****
