

North American Pollinator Protection Campaign Call for Proposals Related to Lepidoptera Conservation

Background

Over the past 24 years, the North American Pollinator Protection Campaign (NAPPC) has been an international force driving interest in the vital role and fragile status of native and managed pollinator species. NAPPC's mission is to encourage the health of resident and migratory pollinating animals in North America. These pollinators are responsible for one-third of global food production. A yearly conference brings together experts from across the world to share knowledge, raise public awareness, promote constructive dialogue, and develop key partnerships to support research on pollinator species. Through the creation of specific task forces, NAPPC encourages experts and interested parties to come together and work on complex issues facing pollinators. One such task force is the Lepidoptera Task Force. Created in 2021, we focus on the promotion, education and protection of crucial moth and butterfly pollinators. Learn more at www.napcc.org.

There are estimated to be up to 20,000 species of butterflies worldwide, providing pollination and ecosystem services of a diverse variety. The number of moth species globally is increased by a factor of 10, to approximately 190,000 species. Although the beauty and complexity of these animals captures people's imaginations and encourages actions to help protect them, the role of these species as pollinators is underestimated. Unlike the life cycles of bee species, which are complex in their own right, Lepidoptera species experience shifts in diet and function, and relationships change with specific plants and habitat elements at each life stage. We at NAPPC have established a goal to build more knowledge and understanding of the crucial role of Lepidoptera in our ecosystems.

Grant Program Details

NAPPC is seeking proposals for research related to Lepidoptera Conservation. The Lepidoptera Task Force has established a new grant program to support projects related to Lepidoptera conservation. Our intent is to support projects that have a meaningful impact that can be accomplished in a year. This includes conservation projects that need some additional support to get off the ground, or projects that are underway but need additional support for completion. In this second year of administering this grant program, we anticipate awarding two projects, each with a

maximum budget of \$10,000. The period of performance will be February 1, 2024 to January 31, 2025.

Priority Areas

The Lepidoptera Task Force has identified the following priority areas for funding, although well-written proposals on other topics will be considered as well. Projects may fall into multiple categories.

1. Community Grant: Projects should focus on community engagement and education. Examples of projects include:
 - a. Youth or school programs
 - b. Neighborhood beautification or education
 - c. Engagement with local stakeholders such as agricultural producers or municipalities
 - d. Training programs
 - e. Community Lepidoptera monitoring program
2. Habitat Implementation Grant: Projects should include the installation of native nectar and host plants that support Lepidoptera.
3. Research Continuation Grant: Given the 1-year performance period, most likely new research projects will not be able to generate findings; however, funding to complete existing research projects may be suitable. Examples of research topics related to conservation include:
 - a. Lepidoptera reintroductions
 - b. Captive rearing methods
 - c. Plant pollinator preference
 - d. Phenological studies
 - e. Impacts of climate change
 - f. Pesticide toxicity

Eligibility

Nonprofits, NGOs, educational institutions, and students are encouraged to apply. Government agencies and for-profit companies are not eligible. Focused, targeted projects with a high likelihood of providing tangible results that can be applied to improving Lepidoptera conservation are preferred. Proposals providing valuable additions to previously funded projects will be considered but results must be distinct. Proposals that focus on political efforts such as lobbying, litigation, and petitions are not eligible. Principal investigators of all funded projects will be expected to present their final report to the Lepidoptera Task Force and are encouraged to serve on the Task Force in the future.

Proposal Requirements

- 1) Proposal title and project team with contact information including email(s), physical mailing address, and telephone number(s).
- 2) Priority area focus/foci.
- 3) Three page project description maximum, with sufficient background and description of methods (12-pt font, single spaced, with page numbers; references are not included in this page limit).
- 4) Detailed budget. As a non-profit organization, the Pollinator Partnership/NAPPC does not pay overhead on funded grants.
- 5) Project timeline by month (February 1, 2024 to January 31, 2025).
- 6) Project team qualifications including a 2-page (maximum) resume of the primary applicant(s).
- 7) Please explain if the proposal is under consideration by other funding organizations.

Assessment of Proposals

The proposals will be reviewed based on the following criteria: defined objectives, conservation impact, budget, feasibility, and merit.

Submission

Email your proposal packets as a single PDF file to Reed Lievers (reed@pollinator.org) by 3PM PST on Friday, October 27, 2023.

Email Reed with any questions.

Funding Decisions

The proposals will be evaluated, and funding notifications will be made by December 1, 2023.
