

Know a community that would benefit from Engaging in Nature?

Want to help build safe space for Colorado wildlife?

The Healthy Habitats Gardening Program provides social, cognitive, emotional, and physical benefits to older adults at memory care, skilled nursing, and rehabilitation facilities across the state through habitat gardening! HHG works alongside residents to install and care for pollinator-focused gardens while providing continued opportunities for education and engagement—**at no cost.** Help increase pollinator habitat *and* human health!
